Equally Effective Alternate Access Plan (EEAAP)

Economist Intelligence Unit

This document is intended to facilitate proactive planning for equitable access to University procured Information and Communication Technology (ICT) products and services. When medium or high-impact systems, software, or processes do not fully meet accessibility requirements, this document is completed by a representative agent of the department or unit requesting procurement as part of our commitment to ensure timely and accessible access to all users. Individuals may request assistance by submitting a ticket through help.utk.edu.

ICT Vendor & Product/Service Information

<table>
<thead>

<td>11/24/2020</td>
</tr>
</tbody>
</table>
Institutional Response
Use this table to document known product/service accessibility issues. Under the “Description of Issue” column, identify known product accessibility issue(s) from validated vendor VPAT/Accessibility Conformance Report and/or other documentation. Then, for each barrier identify alternative solution(s), required resources, and identify responsible parties. Add more rows as needed.

<table>
<thead>
<tr>
<th>Accessibility Barrier</th>
<th>Equally Effective Alternative Access</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Keyboard Navigation is difficult.</strong> [WCAG 2.0 SC 2.1.1; 2.4.1; 2.4.3]</td>
<td></td>
</tr>
<tr>
<td>1. Some of the dynamic content we experienced such as in the “World in Focus” carousel on gfs.eiu.com/ did not function as anticipated when interfacing with a keyboard. It cycled unexpectedly and then did not respond to more natural cycle functions (e.g., tabbing to and selecting an advanced tab).</td>
<td>(1-3) Users who interface with a keyboard, but do not use screen readers should be advised of the limitations of keyboard navigation on this site. Most key functions are accessible by keyboard, but may not function intuitively.</td>
</tr>
<tr>
<td>2. Dynamic content is presented out of order and/or presents content that is not visible when interfacing with a screen reader and/or keyboard.</td>
<td>(4) <strong>There is nothing we can do about this part of the site</strong>, but the vendor should be informed that it is fully non-functional in general and with keyboard.</td>
</tr>
<tr>
<td></td>
<td>(1-4) Nothing unusual; Vendor required to respond to (4) in particular.</td>
</tr>
<tr>
<td></td>
<td>(1-3) The accessibility review team at OIT will recommend/draft a statement, the library staff will be responsible for editing if needed and posting somewhere obvious. We strongly recommend creating web space or consistent presentation for these.</td>
</tr>
<tr>
<td></td>
<td>(4) Library staff should contact the vendor to see what can be done to make this functional.</td>
</tr>
</tbody>
</table>
3. Reading order was sometimes disarray and confusing. There was no capacity to skip to main content.

4. Data.eiu.com was completely non-functional with keyboard (and also with mouse, but experience was different) on the date of our testing.

**Screen Reader Users are not supported for major parts of the site.**

1. Alt text missing for several images within collections. For example, in the collection on Belgium, the map of Belgium has no Alt Text. Moreover, several images that should have been marked as decorative (e.g. the triangles next to the headers in the navigation pane, the lines separating content on the page) were read out with nonsense alt text.

2. Some cases exist where images of text do not have alt text as needed (e.g., “Countries” and “My)

(1-2) **These are not things that we can proactively address** due to the rolling nature of content on the EIU site. Essentially, either the vendor will need to dramatically improve the attention given to ensuring equitable access to visual elements for screen reader users (e.g., alt text, no images of text), or the Library should be prepared to offer the accommodation of live guided support for users who need verbalization and navigation support when using this system.

Accommodations as this are inherently more restrictive for both the end user and the service provider (Library staff in this case).

(1-2) Accommodation plan/service/staffing needed to support users who are unable to access the content on this (or other?) databases due to inaccessibility for screen readers and the users thereof.

(1-2) Library Staff
Navigation is often inconsistent and confusing, especially for keyboard and/or screen reader interaction.

1. In the **ASP portions of the site**, page titles are present, but buried under a lot of menu and other information, making it difficult for a screen reader user to identify their location on the site without a great deal of wasted time.

2. Different pages and areas of the EIU site have very different look/feel/and navigation style. E.g., compare [http://www.eiu.com/](http://www.eiu.com/) to [http://www.eiu.com/index.asp](http://www.eiu.com/index.asp). The ASP page structure and formatting is outmoded and difficult to use in addition to being very different from the non-ASP.

**Implications:** This has negative implications for keyboard and other assistive technology users, users of screen readers, and users with some types of learning disabilities who will struggle with adapting

---

(1-2) **We are limited in our capacity to address this on our end.** The EIU site includes sections that were apparently built at different times with different coding styles, resulting in an inconsistent look, feel, and navigational function for the site on the whole.

The best we can do at this point is to (a) inform users that there are different kinds of user experiences within sections of this site (so they are prepared) and (b) encourage the vendor to update the ASP portions of the site to the more modern code found elsewhere.

(1-4) Nothing unusual; Vendor required to respond to rebuilding request for the more archaic coded parts of site.

(1-4) Library staff should contact the vendor to see what can be done to make this functional.

Statement of this limitation to be included in the accessibility statement in a visible location for those who need it.
<table>
<thead>
<tr>
<th>Images are not always accessible/visible for all.</th>
<th>(1-2) Users can be advised to use third party browser extensions that enhance contrast, such as High Contrast for Google Chrome. This may help many users overcome these limitations of the site. However, the vendor should be advised that the problem could be avoided by, for example, adding a shape or thickness difference element for line graphs and using patterns/textures in addition to color for color coded maps.</th>
<th>(1-2) Access to a third party browser extension such as High Contrast for Google Chrome. This could be proactively installed on all library and lab browsers.</th>
<th>(1-2) Library staff, OIT Lab support staff; Library staff to inform the vendor.</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Color is sometimes used inappropriately as the only means of conveying information, such as the line graph on “ViewsWire: November 24th 2020” in which the several lines can only be understood as distinct based on color; this means that individuals with various color blindnesses will not be able to interpret the content. 2. Color contrast is insufficient in other cases where color alone is used to convey information (e.g., map of South and Central America)</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Neither Closed captioning nor Audio description are provided.</td>
<td>(1) Because only one video is affected, the library staff should be prepared to provide a transcript or an alternative hosting of this video with captions (would require copyright approval). A simpler solution would be to use Canvas Studio, Panopto, etc. to host this video in captioned format locally and inform users of its existence. (2) Vendor required to respond re: awareness</td>
<td>(1) With copyright permission, we would use Canvas Studio, Panopto, etc. to host this video in captioned format locally and inform users of its existence. (2) Vendor required to respond re: awareness</td>
<td>(1) Library staff (2) Library staff to inform vendor.</td>
</tr>
<tr>
<td>1. The first global forecasting service video has no captions; however, all subsequent videos do. 2. None present. This is not a major concern</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
for the majority of the video content we assessed, which was mainly “talking heads.” However, in some instances, such as around 12:09 on video 8 [no direct link available], speakers refer to or present visual content without verbalizing what is being displayed. This content is thus inaccessible for blind users, those with low vision, or those with certain limits to cognitive processing.

The vendor falsely claims that there are audio descriptions, confusing the fact that videos have audio with audio description, which are not the same thing. The vendor should be informed about the distinction.

be for the vendor to caption that video and continue captioning as they did for videos 2-9 in that series.

(2) **There is nothing we can do about this proactively**, since this content is released on rolling basis; The vendor should be informed that (a) audio descriptions verbalize what is presented visually on screen, which is not the same as “audio” (e.g., people speaking) and (b) that this criteria can be met in the context of their videos simply by having speakers verbalize the relevant content of any graphs, charts, or images they display during speaking sections - audio descriptions of people and their settings in this context are not necessary.

of what AD is, its function, and how to produce content that meets the needs of AD without undue strain (very possible for this type of content).

**Accessibility Statement**
The accessibility statement should be posted conspicuously wherever the end user will interact with the platform or software. Recommendations for this form can be found on the UTK Accessibility Statement Recommendations document.
Accessibility Statement Recommendations document.

Commitment Statement

The University of Tennessee and the UT Libraries are committed to providing high quality, accessible content to all members of the UT community. We strive for WCAG AA compliance for all of our vendors. Not all products are up to this level, and in situations when they are not, we are committed to providing equitable opportunities to UT community members who need alternative access.

Economist Intelligence Unit: Compliance Status

Staff from the Office of Information Technology reviewed the Economists Intelligence Unit (EIU) site for accessibility. They report that the EIU partially meets, but does not fully meet, WCAG criteria at the A and AA levels. We are aware of several limitations that will primarily affect

● users who interface with a keyboard or other assistive technology (no mouse) and
● users who interface with screen readers.

Some less common accessibility limitations on the site will affect those who are color blind, have low color contrast discernment, or who are deaf or hard of hearing.

We are working with the vendor to address these limitations and will update this statement as issues are resolved. In the meantime, we remain committed to accessibility. As such, if you find the EIU site to be inaccessible in part or whole, please consider the solutions provided below.

Product Usage Information for Users with Disabilities

If you use a screen reader…

● Please be aware that different parts of the EIU site have significantly different functionality for layout, navigation, and interfacing.
● Though the site primarily uses text to convey information, there are several instances in which graphs, charts, and images are used to convey information that is not in the text. These rarely have alt text available.
● Content is sometimes presented out of order when tabbing through the site.

These limitations are significant. Please contact the library staff at [Phone / Email] to request guided support through the use of this site as needed.

If you interface with a keyboard or assistive technology…

● Please be aware that dynamic content (such as manually advanced carousel content) on the website generally works with a keyboard, but may be awkward and non-intuitive in the way the website responds to key commands.
● Please note that tabbing order is sometimes inconsistent or non-logical, but most content can be accessed by keyboard.
If you encounter limitations in accessing content by way of keyboard or other AT, please contact the library staff at [Phone / Email] to request guided support through the use of this site as needed.

If you are color blind or have low color contrast perception…

● Please know that several of the images and graphs on the EIU site use color to convey meaning. Sometimes the distinction among colors is insufficient.

If you encounter limitations in accessing content because of use of color, we encourage you to first try using a browser plugin to improve contrast, such as High Contrast for Google Chrome. If such tools do not provide you access, please reach out to the library staff at [Phone / Email] to request guided support through the use of this site as needed.

If you are deaf, hard of hearing or otherwise require captions on videos…

● Please know that most, but not all, of the videos on EIU are captioned. In the event that you encounter a video that is not captioned that you’d like to access, please reach out to the library staff at [Phone / Email] to request a transcript.

Accommodation Planning

If EEAAP workarounds are inadequate to provide equal access for a specific individual’s situation, an accommodation plan is necessary.

● If a student may need an accommodation to use the product/service…
  o Contact Student Disability Services (sds.utk.edu).
  o Describe the product/service and the barrier that may need to be accommodated (this allows SDS to prepare for meeting accommodation needs in a timely fashion).

● If a faculty or staff member, member of the general public, or other non-affiliated person (visitors, vendors, guest speakers) may need an accommodation to use the product service…
  o Contact the Office of Equity and Diversity (oed.utk.edu).
  o Describe the product/service and the barrier that may need to be accommodated (this allows OED to prepare for meeting accommodation needs in a timely fashion).

Administrative Approvals

By signing this request, you affirm that the plan has been reviewed and is an acceptable solution that meets UT Knoxville compliance requirements and all disability related legislation.
